Tekhnicheskikh Nauk. Izvestiya 1942, no. 5/6, p. 3-16

DESCRIPTORS: *Coal, Chemical analysis, *Methanes,
Adsorption.

An account is given of research conducted by A. A. Skochinski and his co-workers at the Mining Institute of the Academy of Sciences U. S. S. R. on gas liberation from coal and desorption of methane under high pressures. Under pressure of 100 kg/sq cm and higher the amount of methane present in the pores of coal in the free state exceeds that which can be desorbed from the coal under the same pressure. The maximum of methane adsorbed by the coal is apparently reached at pressures of 100-150 kg/sq cm. (Author)

*Wetting agents, Oils.

The surface activity of aqueous solutions of a demulsifying agent prepared from sulfonated vegetable oils and termed "sum" was studied in connection with demulsification of crude oil emulsions and compared with that of a mixture of sodium salts of sulfonaphtheneic acids. The surface tension of solutions of "sum" was found to decrease at the interface with air with rise of the concentration of "sum" and to reach

QUANTITATIVE REMOVAL OF TETRAETHYL LEAD
FROM MOTOR FUELS. [1961] Sp. 1 ref.
Order from OTS or SLA \$1.10

61-18210

Trans. of Akademiya Nauk SSSR, Otdelenie
Tekhnicheskikh Nauk. Izvestiya, 1944, p. 690-694.

DESCRIPTORS: *Gasoline, Chemical analysis, *Lead
compounds, *Ethyl radicals, Quantitative analysis.

176612

A method of complete removal of tetraethyllead from
gasoline is outlined which is also suitable for gravi-
metric and volumetric analysis. It consists in
heating the sample with four volumes glacial acetic
acid at 75-80° for 3 hours, washing out the acetic acid
with water, evaporating the aqueous acetic acid to
dryness and converting the lead acetate into a sulfate
or concentrating the acetic acid solution and titrating

CHLORINATION OF PETROLEUM PENTANE AND
PREPARATION OF AMYL ALCOHOL AND AMYL
ACETATE. [1961] 11p. 22 refs.
Order from OTS or SLA \$1.60 61-18208

Trans. of Akademija Nauk SSSR. Otdelenie Tekhnicheskikh Nauk. Izvestiya, 1944, p. 695-708.

DESCRIPTORS: *Pentanes, *Chlorination, *Acetates, Pentyl radicals, Pentanols, Synthesis.

A study of continuous chlorination of pentanes from petroleum was carried out. Use of dry chlorine and an excess of pentane in the reaction mixture were essential for the avoidance of polychlorides and deposition of carbon. The recommended ratio of pentane to chlorine is 7:1. Complete hydrolysis of isoamyl chloride, primary as well as secondary, is possible with sodium oleate and water in a one hour reaction at 170-180°, at which (Chemistry--Organic, TT, v. 6, no. 8) (over)

[MATERIALS ON THE] CHEMISTRY OF OXIDIZING
CRACKING OF HYDROCARBONS IN THE VAPOR
PHASE, III. [1961] 6p. 9 refs.
Order from OTS or SLA \$1.10

61-18209

Trans. of ~~Academiya~~ Academy Nauk SSSR. Otdelenie Tekhnicheskikh Nauk (Izvestiya), 1944, p. 709-715.

DESCRIPTORS: *Hydrocarbons, Decomposition,
Oxidation.

Oxidizing cracking of normal octane gave products among which no peroxides were found. Nevertheless, there is reason to believe that peroxides constitute primary products of this process. The presence of oxygen in the reaction zone up to a certain limit (20%) promotes decomposition of normal octane and formation of products of its oxidation. Above this limit the decomposition reaction is retarded, as is the oxidation to aldehydes and acids. The temperature is the most (Chemistry--Organic, TT, v. 6, no. 6) (over)

Order from OTS or SLA \$1.10

61-18207

Trans. of Akademiya Nauk SSSR. Otdelenie Tekhnicheskikh Nauk. (Izvestiya), 1944, p. 716-723.

DESCRIPTORS: *Fuels, *Gasoline, Production, *Benzine, Oxidation, Decomposition.

Oxidizing cracking of ligroin and gas oil in the presence of enriched air containing 40% oxygen occurs without explosions or ignition of the charge stock. In the process of oxidizing cracking with oxygen-enriched air no carbon is formed. The suitability was confirmed of charcoal as a contact substance in oxidizing cracking with air enriched with oxygen. This contact packing (Materials--Fuels, TT, v. 6, no. 9) (over)

CRACKING OF MAZUT OVER AN ALUMINOSILICATE
CATALYST. [1961] 5p. 12 refs.
Order from OTS or SLA \$1.10

61-18206

Trans. of Akademii Nauk SSSR. Otdelenie Tekhnicheskikh Nauk. Izvestiya, 1944, p. 724-728.

DESCRIPTORS: *Fuel oil, *Petroleum, *Decomposition, Aluminum compounds, *Silicates, *Catalysis.

Cracking of mazut over an aluminosilicate catalyst was shown to be possible at temperatures lower than used in commercial practice. Distillates were obtained by cracking mazut amounting to up to 80 per cent on the charge, from which gasoline with 150° end point was distilled off, amounting to 15 per cent, and gasoline with 200° end point - to 26 per cent. The octane number of the 150° end point gasoline, when treated with 3 ml. TEL per kg., was 89.1. The aluminosilicate catalyst used resembles aluminum chloride in its action, but exceeds the latter in its life span and simplicity of regeneration. (Author)
